

EDAX Particle Phase Analysis:

A New SEM Capability for Automated Elemental and Morphological Analysis of Dispersed Particles and Precipitates

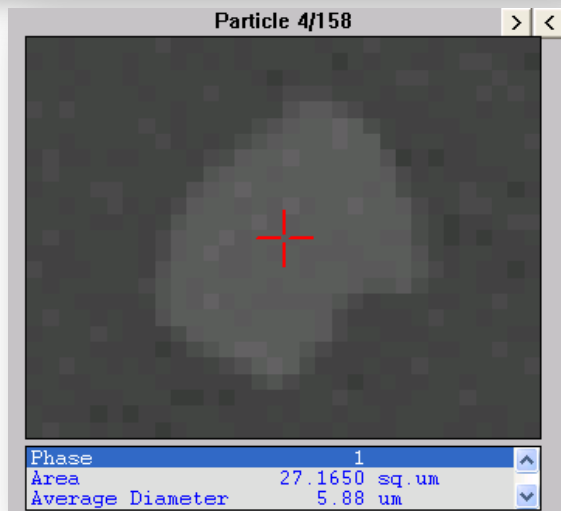

Paulo Perez
Surface Scientist
Surface Analysis Lab

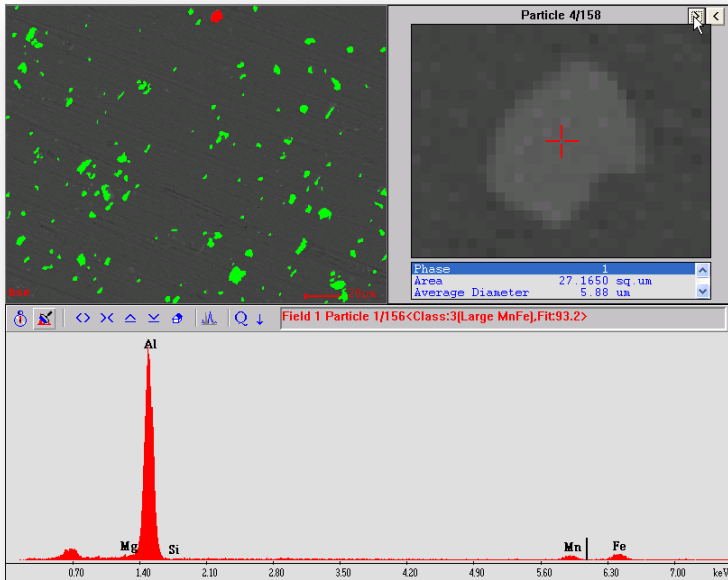

Morphology Analysis

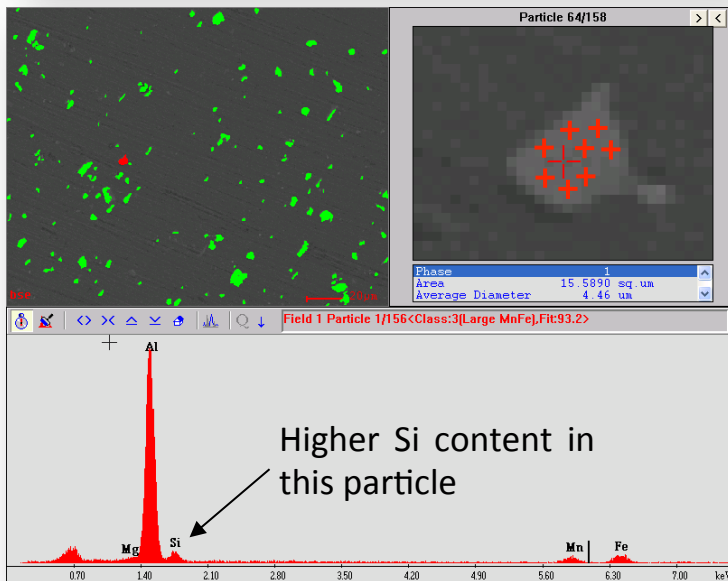

- Particles are identified from the matrix based on image contrast from a BSE image
- Size, shape, and morphology of each individual particle in the field of view is characterized by the image processing software based on the number of pixels contained by a particle
 - Area
 - Diameter
 - Perimeter
 - Orientation
 - Aspect ratio
 - Shape (roundness)

Elemental Analysis

Allows classification of each particle into different groups based on its elemental components

C:\EDAXProjects\AlumCan\lib1.cls

1 Part1	Insert	Replace
2 Part2	Delete	Del All
	Add Pass Filter	

Part2 Type ZAF Elem Wt%

MgK 1.62	MgK	1.62	ZAF Elem Wt%	Classify
AlK 78.45				
SiK 0.00				
MnK 9.37	<input type="checkbox"/> Class Filter	Min	0.0	Min Fit % 50.0
FeK 10.57		Max	100.0	Cls 1: 81.5%
	<input type="checkbox"/> Pre Scan			

Elemental Analysis

C:\PART\USR\9Fields\stub01\stub01.c

2 Ca Px
3 Mg Px
4 Garnet
5 Rutile

Garnet Type

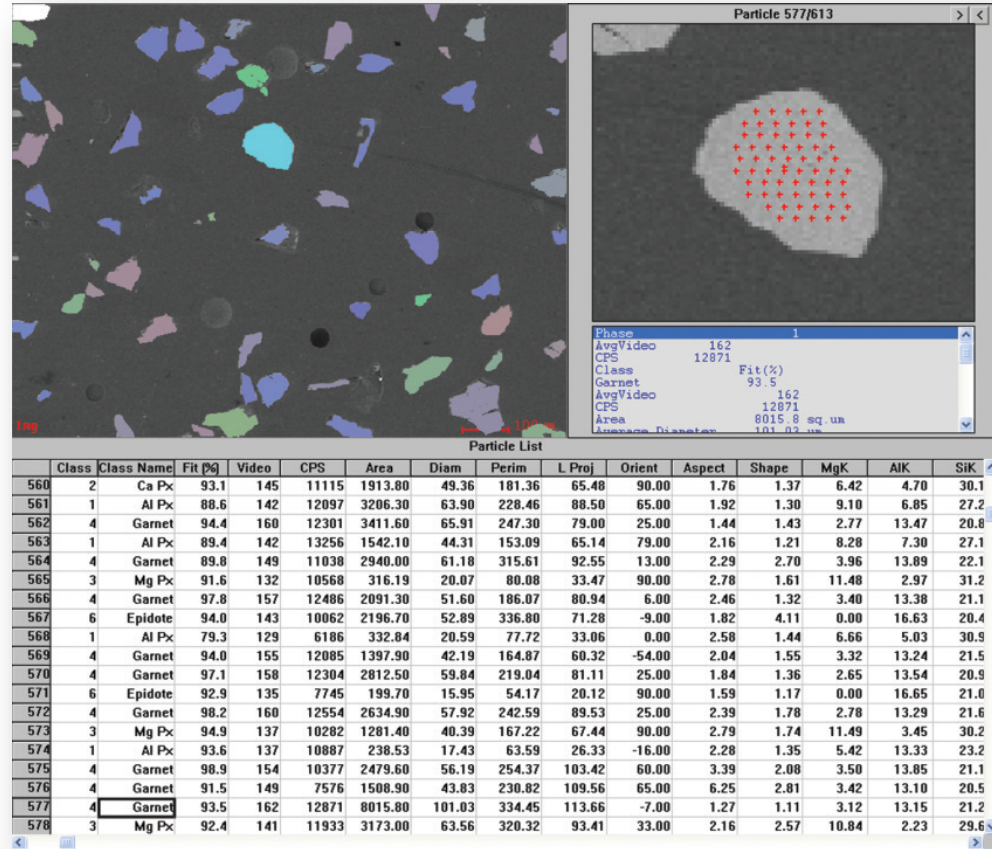

OK 33.43
NaK 0.00
MgK 3.16
AlK 13.81
SiK 21.63
PK 0.00
SK 0.00
CaK 5.67
TiK 0.00

OK 33.43 ZAF Elem Wt

Class Filter
Min 0.0
Max 100.0

Pre Scal 1.0

Pass Filter
 Min CF 1000

Precipitated minerals in a polished rock are classified and color-coded based on their identified elemental components

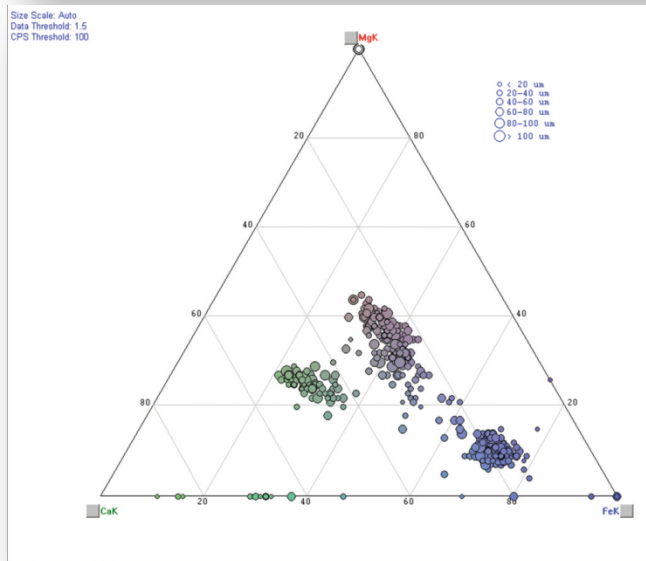

Elemental Analysis

Expands the EDS capability of the SEM

Allows automated analysis of precipitates embedded on a matrix

Makes it easier to obtain physical statistics of particles that require larger field of view

Ternary diagram showing the distribution of sizes and elemental ratios of the particles

Limitations

Energy resolution: **130 eV**

Spatial resolution: **~1 μm^3**

Limit of Detection

1000 – 3000 ppm (0.1 – 0.3%)

Accuracy: ~95 %

Relative Error: 1% for polished sample with standards

5% for particulates and rough surfaces without standard

major components (>10%) $\pm 5\%$

minor components (1 – 10%) $\pm 5 - 10\%$

trace components (<1 %) $\pm 10 - 20\%$

Not a surface analysis technique!!!
